

## Golem Wildwoods

Golem Wildwoods is a 5 reel game with 1×3×4×3×1 window style with 36 ways to win. Ways to win means that players achieve a winning combination anytime they get identical symbols on adjacent reels from the first reel on the left to the last reel on the right in any form of 'line'. Only the highest winning combination of one symbol is paid out per way. Wins from different ways add up.

### Wild

WILD substitutes for all symbols. WILD appears only on the 1st and 5th reel.

### Wild Multiplier

WILD appears with a multiplier. Each active Wild symbol on any winning combination multiplies the win by its individual multiplier from 1-9. If two WILD symbols are participating in the win, the multiplier for that win is calculated as the mutual multiplication result of each multiplier visible on the winning symbol. Thus, the highest possible multiplier is 81.
